

Supplementary Fig. 23. Graphical representation of a patient with recurrence (PA27). The HE4 value is displayed on the log scale on the left vertical axis, and the CA125 value is displayed on the log scale on the right vertical axis. Progressive disease is confirmed after approximately 13 months during the observation period. HE4, human epididymis protein 4; CA125, cancer antigen 125; CS, complete surgery.
