

Supplementary Fig. 3. Graphical representation of a patient with recurrence (PA03). The HE4 value is displayed on the log scale on the left vertical axis, and the CA125 value is displayed on the log scale on the right vertical axis. Lymphatic fluid retention in the abdominal cavity is attributed to the effects of surgery and progressive disease at the end of the observation period. HE4, human epididymis protein 4; CA125, cancer antigen 125; CS, complete surgery.
