

Supplementary Fig. 39. Graphical representation of a patient with no recurrence (PA50). The HE4 value is displayed on the log scale on the left vertical axis, and the CA125 value is displayed on the log scale on the right vertical axis. The patient has mild renal dysfunction (serum creatinine level, 0.8-1.0 mg/dL; estimated glomerular filtration rate, 45-60 mL/min/1.73 m²). HE4, human epididymis protein 4; CA125, cancer antigen 125; CS, complete surgery.
